Method and scope

Each of the 2,016 rows holds one combined illustrative packet. Coverage counts distinct five-minute slots. An absent slot would be missing; a receipt more than five minutes after the slot end would be delayed. Time windows include their starts and exclude their ends. Night metrics include every qualifying interval within the stated UTC date range.

Dew point is calculated from the air temperature and relative humidity using the Magnus approximation over water (17.62 and 243.12°C). Surface margin is surface temperature minus dew point. Actual surface-margin reporting requires a surface reading. The sound average combines the five-minute dBA readings on an energy basis. No recording is produced.

DOCUMENT INTEGRITY CHECK & TECHNICAL NOTE FOR REVIEWING PARTIES

Free file verification. The public service can confirm that this exact illustrative PDF matches the published sample. It contains neither an original hardware transmission nor an inspected property. For registered field files, the check covers electronic record integrity only. Physical sensor placement and ambient sources remain unverified.

A single sensor position reflects conditions at that point. Local activity, weather and reflections may influence readings. Dutyholders can maintain their own independent operational or boundary records separately through prooftimeline.com.

Complete-file SHA-256 receipt (separate text download)

The printed fingerprint covers the separate CSV. The complete-file fingerprint is calculated after the PDF is finished. This example carries no professional endorsement or council approval.
